Active Weather Warnings, Watches and Advisories by County:

http://www.wrh.noaa.gov/sto/brief/wwa_bc_cal.php

WEATHER SYNOPSIS BY REGION

NORTHERN CALIFORNIA

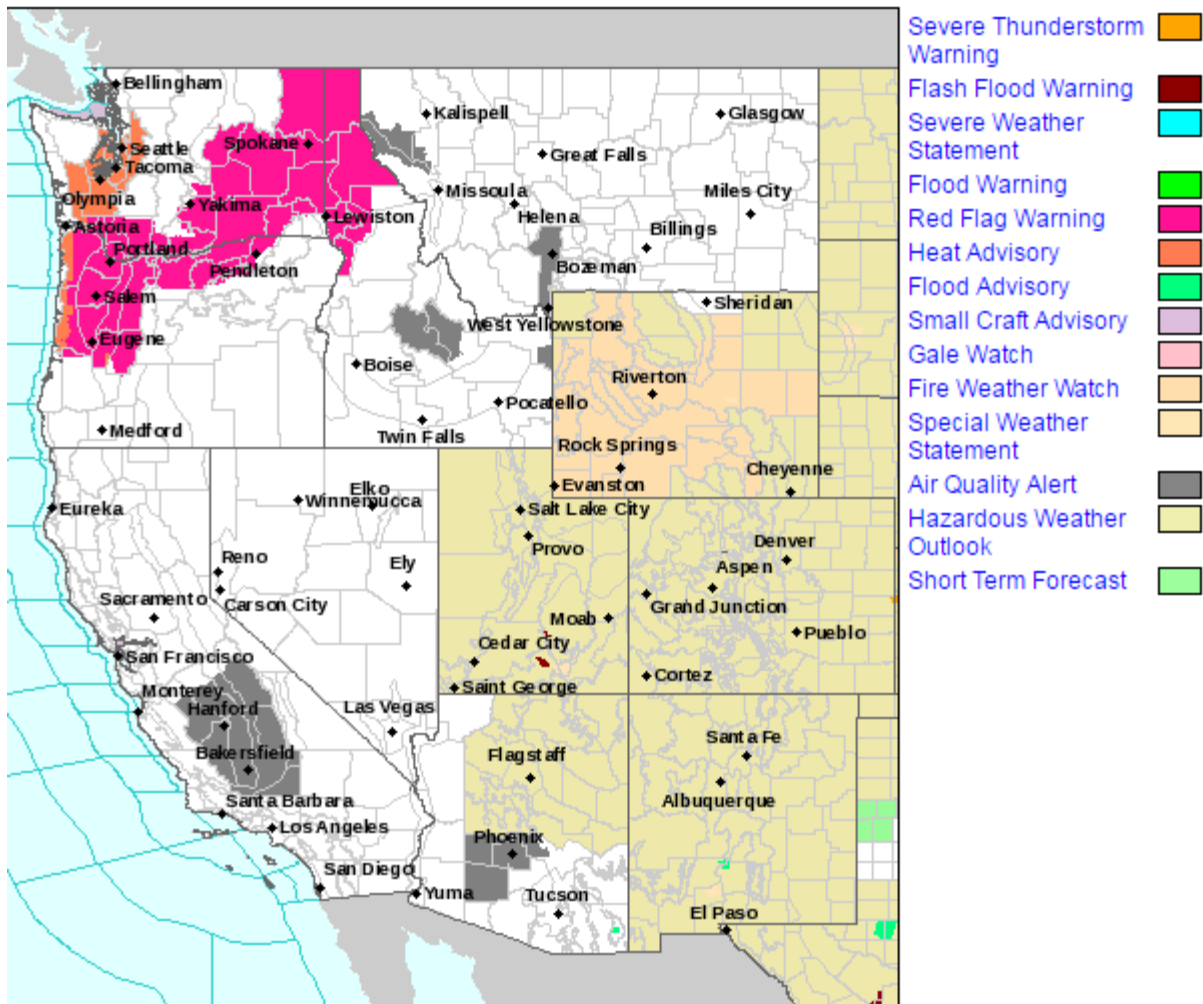

A weak low pressure trough will linger over the region today, and Saturday into Sunday will see a bit of a high pressure ridge over the region. Little change in our weather is likely for the next few days in spite of that shift in weather pattern. Sunday night the weather pattern will continue changing as a fairly strong trough develops off shore. This trough will drift toward the coast Monday and pass through the region Tuesday. Some very light precipitation may become possible for areas Northwest of Point Arena to Yreka line Monday night into early Tuesday. After Tuesday, the details are uncertain, but for Wednesday and Thursday, a rather strong low is likely to move south off the British Columbia coast and start lingering off the Pacific Northwest coast next Friday. Timing and strength of the low will be key to the weather we actually see develop over the region, but at a minimum, some gusty southerly winds over the higher elevations and much cooler temperatures are likely the latter half of this week. For many areas through Wednesday, low afternoon relative humidity (RH) and poor overnight recovery will continue. Fairly widespread afternoon low RH values of 8-18% will be in place, and mid and upper slopes will continue to see overnight recovery mostly between 30-45%. However, some of the higher elevations of the northern Coast Range and northwest mountains will see overnight values linger in the 20-25% range for quite a few hours. The marine layer will remain reasonably deep and get even deeper next week, so more coastal areas will begin seeing higher RH over the next 7 days as a result. Some gusty southerly to westerly winds will develop over the higher elevations Monday and last overnight. Tuesday and Wednesday will probably see typical breezy afternoons east of the Cascade/Sierra crest and somewhat stronger winds over the very highest elevations. Late in the week, however, there is a chance that stronger, more widespread gusty southerly winds will develop in more areas with gusts of 25-35 mph becoming fairly common. RH may be higher by then as well, but significant fire potential will probably not lower much in spite of that. Afternoon high temperatures into early next week will continue to be in the 90s for the warmest inland valleys, then significant cooling is expected. By the end of next week, the warmest inland areas could be in the lower and mid 80s, about 7-10 degrees below normal.

SOUTHERN CALIFORNIA

A weak area of low pressure near the Nevada border will bring isolated thunderstorms to the Sierra and to the deserts bordering Nevada this afternoon. This low will drop southward into Southern California Saturday maintaining isolated afternoon thunderstorms over the Mojave National Preserve. The thunderstorm threat will end across the entire region Sunday as the low moves into Arizona. Temperatures will be around 5 degrees below normal through Saturday, with mid 70s to mid 80s across the mountains and mid 80s to mid 90s in the valleys. Minimum humidity will be mainly between 12% and 25% above and inland from the marine layer through Saturday. The marine layer will be around 3,000 feet deep through Saturday, with morning low clouds and fog making it over most coastal valley locations. High pressure will approach California from the southwest bringing significant warming and low humidity away from the coast Sunday and Monday. Temperatures will reach 100 degrees over the warmest valley locations by Monday. A deep Pacific trough will drop down the West Coast bringing a cooling trend and a small increase in humidity to the region Tuesday through the end of next week. This trough will also bring strong and gusty south to west winds to the mountain ridges and desert passes Tuesday afternoon through the end of next week.
